# Overview

Course overview

MultiMath demo app

Installing TypeScript

Running the compiler

Configuring a project with tsconfig.json

# Course Overview

Taking Advantage  
of Built-in Types

Writing Better  
Functions with  
TypeScript

Creating and  
Using Custom  
Types

Creating and  
Consuming  
Modules

Being More  
Productive with  
Type Declaration  
Files

# Demo

## Demo project overview

Demo

**Installing TypeScript and running the compiler**

# TypeScript Project Files

Simple JSON text file named tsconfig.json

Stores compiler options used with the project

Specifies files to be included or excluded in compilation

Supports configuration inheritance

# Adding Compiler Options to tsconfig.json

```
tsconfig.json x
1 {
2   "compilerOptions": {
3     "target": "es5",
4     "noUnusedLocals": true,
5     "outFile": "output.js"
6   },
7   "files": [
8     "app.ts"
9   ]
10 }
```

# Adding Compiler Options to tsconfig.json

```
tsconfig.json x
1  {
2      "compilerOptions": { ←
3          "target": "es5",
4          "noUnusedLocals": true,
5          "outFile": "output.js"
6      }, →
7      "files": [
8          "app.ts"
9      ]
10 }
```

# Adding Compiler Options to tsconfig.json

```
tsconfig.json x
1  {
2      "compilerOptions": {
3          → "target": "es5",
4            "noUnusedLocals": true,
5            "outFile": "output.js"
6        },
7        "files": [
8            "app.ts"
9        ]
10 }
```

# Adding Compiler Options to tsconfig.json

```
tsconfig.json x
1 {
2   "compilerOptions": {
3     "target": "es5",
4     "noUnusedLocals": true,
5     "outFile": "output.js"
6   },
7   "files": [
8     "app.ts"
9   ]
10 }
```

# Adding Compiler Options to tsconfig.json

```
tsconfig.json x
1 {
2     "compilerOptions": {
3         "target": "es5",
4         "noUnusedLocals": true,
5         "outFile": "output.js"
6     },
7     "files": [
8         "app.ts"
9     ]
10 }
```

# Adding Compiler Options to tsconfig.json

```
tsconfig.json x
1  {
2    "compilerOptions": {
3      "target": "es5",
4      "noUnusedLocals": true,
5      "outFile": "output.js"
6    },
7    "files": [
8      "app.ts"
9    ]
10 }
```

# Adding Compiler Options to tsconfig.json

```
tsconfig.json x
1  {
2    "compilerOptions": {
3      "target": "es5",
4      "noUnusedLocals": true,
5      "outFile": "output.js"
6    },
7    "files": [ ←
8      "app.ts"
9    → ]
10 }
```

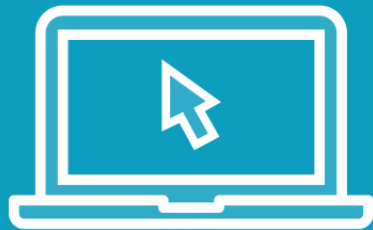

Demo

Configuring compiler options in  
`tsconfig.json`
